

QSFP+

EQ854X-3MCD01

40Gbps 850nm 100M QSFP+ Optical Transceiver

- > High Channel Capacity: 40 Gbps per module
- > Up to 11.1Gbps Data rate per channel
- Maximum link length of 100m links on OM3 multimode fiber Or 150m links on OM4 multimode fiber
- High Reliability 850nm VCSEL technology
- Electrically hot-pluggable
- Digital diagnostic SFF-8436 compliant
- Case operating temperature range:0°C to 70°C
- Power dissipation < 1.5 W</p>

Applications

- 40G Ethernet
- Infiniband QDR
- Fiber channel

Standard

- Compliant to IEEE 802.3ba
- Compliant to SFF-8436
- RoHS Compliant.

General Description

ETU-LINK EQ854X-3MCD01 is designed for use in 40 Gigabit per second links over multimode fiber. They are compliant with the QSFP+ MSA and IEEE 802.3ba 40GBASE-SR4.

The optical transmitter portion of the transceiver incorporates a 4-channel VCSEL (Vertical Cavity

Surface Emitting Laser) array, a 4-channel input buffer and laser driver, diagnostic monitors, control and bias blocks. For module control, the control interface incorporates a Two Wire Serial interface of clock and data signals Diagnostic monitors for VCSEL bias, module temperature, transmitted optical power, received optical power and supply voltage are implemented and results are available through the TWS interface. Alarm and warning thresholds are established for the monitored attributes. Flags are set and interrupts generated when the attributes are outside the thresholds. Flags are also set and interrupts generated for loss of input signal (LOS) and transmitter fault conditions. All flags are latched and will remain set even if the condition initiating the latch clears and operation resumes. All interrupts can be masked and flags are reset by reading the appropriate flag register. The optical output will squelch for loss of input signal unless squelch is disabled. Fault detection or channel deactivation through the TWS interface.

The optical receiver portion of the transceiver incorporates a 4-channel PIN photodiode array, a 4-channel TIA array, a 4 channel output buffer, diagnostic monitors, and control and bias blocks. Diagnostic monitors for optical input power are implemented and results are available through the TWS interface. Alarm and warning thresholds are established for the monitored attributes. Flags are set and interrupts generated when the attributes are outside the thresholds. Flags are also set and interrupts generated for loss of optical input signal (LOS). All flags are latched and will remain set even if the condition initiating the flag clears and operation resumes. All interrupts can be masked and flags are reset upon reading the appropriate flag register. The electrical output will squelch for loss of input signal (unless squelch is disabled) and channel de-activation through TWS interface. Status and alarm/warning information are available via the TWS interface.

Parameter	Symbol	Min.	Тур.	Max.	Unit	Note

37	Tx1n	Transmitter Inverted Data Output	
38	GND	Transmitter Ground (Common with Receiver Ground)	1

Figure 1---Pin out of Connector Block on Host Board

Notes:

 GND is the symbol for signal and supply (power) common for QSFP+ modules. All are common within the QSFP+ module and all module voltages are referenced to this potential unless otherwise noted. Connect these directly to the host board signal common ground plane.

5

- 2) VccRx, Vcc1 and VccTx are the receiving and transmission power suppliers and shall be applied concurrently. Recommended host board power supply filtering is shown below. Vcc Rx, Vcc1 and Vcc Tx may be internally connected within the QSFP+ transceiver module in any combination. The connector pins are each rated for a maximum current of 500mA.
- 3. A Reference Clock input is not required.

Digital Diagnostic Functions

ETU-LINK EQ854X-3MCD01 support the 2-wire serial communication protocol as defined in the QSFP+ MSA., which allows real-time access to the following operating parameters:

- Transceiver temperature
- Laser bias current
- Transmitted optical power
- Received optical power
- Transceiver supply voltage

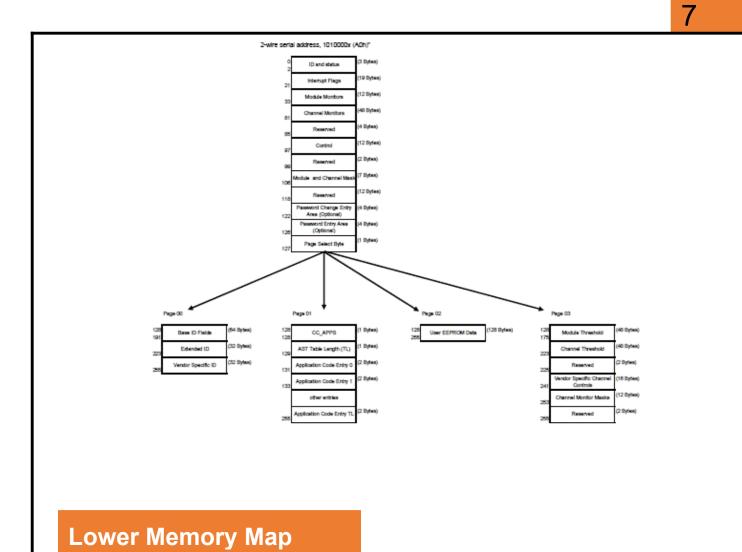

It also provides a sophisticated system of alarm and warning flags, which may be used to alert end-users when particular operating parameters are outside of a factory-set normal range.

The operating and diagnostics information is monitored and reported by a Digital Diagnostics Transceiver Controller inside the transceiver, which is accessed through the 2-wire serial interface. When the serial protocol is activated, the serial clock signal (SCL pin) is generated by the host. The positive edge clocks data into the QSFP+ transceiver into those segments of its memory map that are not write-protected. The negative edge clocks data from the QSFP+ transceiver. The serial data signal (SDA pin) is bi-directional for serial data transfer. The host uses SDA in conjunction with SCL to mark the start and end of serial protocol activation. The memories are organized as a series of 8-bit data words that can be addressed individually or sequentially. The 2-wire serial interface provides sequential or random access to the 8 bit parameters, addressed from 00h to the maximum address of the memory.

This clause defines the Memory Map for QSFP+ transceiver used for serial ID, digital monitoring and certain control functions. The interface is mandatory for all QSFP+ devices. The memory map has been changed in order to accommodate 4 optical channels and limit the required memory space. The structure of the memory is shown in Figure 2 -QSFP+ Memory Map. The memory space is arranged into a lower, single page, address space of 128 bytes and multiple upper address space pages. This structure permits timely access to addresses in the lower page, e.g. Interrupt Flags and Monitors. Less time critical entries, e.g. serial ID information and threshold settings are available with the Page Select function. The structure also provides address expansion by adding additional upper pages as needed. For example, in Figure 2 upper pages 01 and 02 are optional. Upper page 01 allows implementation of Application Select Table, and upper page 02 provides user read/write space. The lower page and upper pages 00 and 03 are always implemented. The interface address used is A0xh and is mainly used for time critical data like interrupt handling in order to enable a "one-time-read" for all data related to an interrupt situation. After an Interrupt, IntL, has been asserted, the host can read out the flag field to determine the effected channel and type of flag.

For more detailed information including memory map definitions, please see the QSFP+ MSA Specification.

Figure 2 – QSFP+ Memory Map

The lower 128 bytes of the 2-wire serial bus address space, see Table 1, is used to access a variety of Measurements and diagnostic functions, a set of control functions, and a means to select which of the various upper memory map pages are accessed on subsequent reads. This portion of the address space is always directly addressable and thus is chosen for monitoring and control functions that may need to be repeatedly accessed. The definition of identifier field is the same as page 00h Byte 128.

Table 1— Lower Memory Map

Byte Address	Description	Туре
0	Identifier (1 Byte)	Read-Only
1-2	Status (2 Bytes)	Read-Only
3-21	Interrupt Flags (19 Bytes)	Read-Only
22-33	Module Monitors (12 Bytes)	Read-Only
34-81	Channel Monitors (48 Bytes)	Read-Only
82-85	Reserved (4 Bytes)	Read-Only
86-97	Control (12 Bytes)	Read/Write
98-99	Reserved (2 Bytes)	Read/Write
100-106	Module and Channel Masks (7 Bytes)	Read/Write
107-118	Reserved (12 Bytes)	Read/Write
119-122	Password Change Entry Area (optional) (4 Bytes)	Read/Write
123-126	Password Entry Area (optional) (4 Bytes)	Read/Write
127	Page Select Byte	Read/Write

Status Indicator Bits

The Status Indicators are defined in Table 2.

Table 2 — Status Indicators

Byte	Bit	Name	Description
1	All	Reserved	
2	7	Reserved	
	6	Reserved	
	5	Reserved	
	4	Reserved	
	3	Reserved	
	2	Reserved	
	1	IntL	Digital state of the IntL interrupt output pin.
	0	Data_Not_Ready	Indicates transceiver has not yet achieved power up and monitor data
			is not ready. Bit remains high until data is ready to be read at which
			time the device sets the bit low.

Interrupt Flags

A portion of the memory maps (Bytes 3 through 21), form a flag field. Within this field, the status of LOS and Tx Fault as well as alarms and warnings for the various monitored items is reported. For normal operation and default state, the bits in this field have the value of 0b. For the defined conditions of LOS, Tx Fault, module and channel alarms and warnings, the appropriate bit or bits are set, value = 1b. Once asserted, the bits remained set (latched) until cleared by a read operation that includes the affected bit or reset by the ResetL pin. The Channel Status Interrupt Flags are defined in Table 3.

Table 3 — Channel Status Interrupt Flags

Byte	Bit	Name	Description
3	7	L-Tx4 LOS	Latched TX LOS indicator, channel 4 (Not support)
	6	L-Tx3 LOS	Latched TX LOS indicator, channel 3 (Not support)
	5	L-Tx2 LOS	Latched TX LOS indicator, channel 2 (Not support)
	4	L-Tx1 LOS	Latched TX LOS indicator, channel 1 (Not support)
	3	L-Rx4 LOS	Latched RX LOS indicator, channel 4
	2	L-Rx3 LOS	Latched RX LOS indicator, channel 3
	1	L-Rx2 LOS	Latched RX LOS indicator, channel 2
	0	L-Rx1 LOS	Latched RX LOS indicator, channel 1
4	7-4	Reserved	
	3	L-Tx4 Fault	Latched TX fault indicator, channel 4
	2	L-Tx3 Fault	Latched TX fault indicator, channel 3
	1	L-Tx2 Fault	Latched TX fault indicator, channel 2
	0	L-Tx1 Fault	Latched TX fault indicator, channel 1
5	All	Reserved	

The Module Monitor Interrupt Flags are defined in Table 4.

	Table 4 — Module Monitor Interrupt Flags						
Byte	Bit	Name	Description				
6	7	L-Temp High Alarm	Latched high temperature alarm				
	6	L-Temp Low Alarm	Latched low temperature alarm				
	5	L-Temp High Warning	Latched high temperature warning				
	4	L-Temp Low Warning	Latched low temperature warning				
	3-0	Reserved

Module Monitors

Real time monitoring for the QSFP+ module include transceiver temperature, transceiver supply voltage, and monitoring for each transmit and receive channel. Measured parameters are reported in 16-bit data fields, i.e., two concatenated bytes. These are shown in Table 6.

Table 6 — Module Monitoring Values					
Byte	Bit	Name	Description		
22	All	Temperature MSB	Internally measured module temperature		
23	All	Temperature LSB			
24-25	All	Reserved			
26	All	Supply Voltage MSB	Internally measured module supply voltage		
27	All	Supply Voltage LSB			
28-33	All	Reserved			

- -

Channel Monitoring

Real time channel monitoring is for each transmit and receive channel and includes optical input power , Tx bias current and Tx output Power. Measurements are calibrated over vendor specified operating temperature and voltage and should be interpreted as defined below. Alarm and warning threshold values should be interpreted in the same manner as real time 16-bit data. Table 7 defines the Channel Monitoring.

Byte	Bit	Name	Description		
34	All	Rx1 Power MSB	Internally measured RX input power, channel 1		
35	All	Rx1 Power LSB			
36	All	Rx2 Power MSB	Internally measured RX input power, channel 2		
37	All	Rx2 Power LSB			
38	All	Rx3 Power MSB	Internally measured RX input power, channel 3		
39	All	Rx3 Power LSB			
40	All	Rx4 Power MSB	Internally measured RX input power, channel 4		
41	All	Rx4 Power LSB

55	All	Tx3 Power LSB	
56	All	Tx4 Power MSB	Internally measured TX output power, channel 4
57	All	Tx4 Power LSB	
58-65			Reserved channel monitor set 4
66-73			Reserved channel monitor set 5
74-81			Reserved channel monitor set 6

Control Bytes

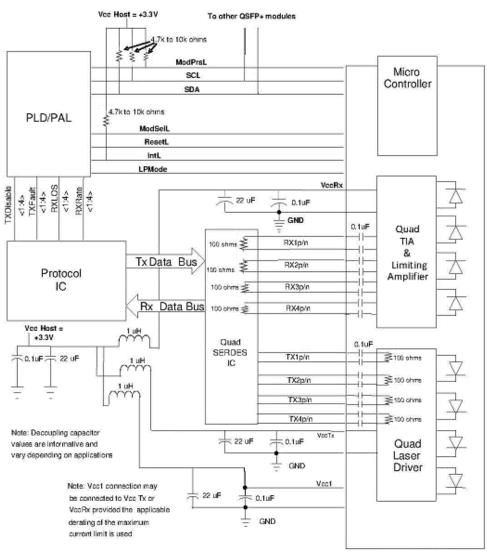

Control Bytes are defined in Table 8

Table 8 — Control Bytes					
Byte	Bit	Name	Description		
86	7-4	Reserved			
	3	Tx4_Disable	Read/write bit that allows software disable of transmitters		
	2	Tx3_Disable	Read/write bit that allows software disable of transmitters		
	1	Tx2_Disable	Read/write bit that allows software disable of transmitters		
	0	Tx1_Disable	Read/write bit that allows software disable of transmitters		
87	7	Rx4_Rate_Select	Software Rate Select, Rx channel 4 msb		
	6	Rx4_Rate_Select	Software Rate Select, Rx channel 4 lsb		
	5	Rx3_Rate_Select	Software Rate Select, Rx channel 3 msb		
	4	Rx3_Rate_Select	Software Rate Select, Rx channel 3 lsb		
	3	Rx2_Rate_Select	Software Rate Select, Rx channel 2 msb		
	2	Rx2_Rate_Select	Software Rate Select, Rx channel 2 lsb		
	1	Rx1_Rate_Select	Software Rate Select, Rx channel 1 msb		
	0	Rx1_Rate_Select	Software Rate Select, Rx channel 1 lsb		
88	7	Tx4_Rate_Select	Software Rate Select, Tx channel 4 msb (Not support)		
	6	Tx4_Rate_Select	Software Rate Select, Tx channel 4 lsb (Not support)		
	5	Tx3_Rate_Select	Software Rate Select, Tx channel 3 msb (Not support)		
	4	Tx3_Rate_Select	Software Rate Select, Tx channel 3 lsb (Not support)		
	3	Tx2_Rate_Select	Software Rate Select, Tx channel 2 msb (Not support)		
	2	Tx2_Rate_Select	Software Rate Select, Tx channel 2 lsb (Not support)		
	1	Tx1_Rate_Select	Software Rate Select, Tx channel 1 msb (Not support)		
	0	Tx1_Rate_Select	Software Rate Select, Tx channel 1 lsb (Not support)		
89	All	Rx4_Application_Select	Software Application Select per SFF-8079, Rx Channel 4		
90	All	Rx3_Application_Select	Software Application Select per SFF-8079, Rx Channel 3		
91	All	Rx2_Application_Select	Software Application Select per SFF-8079, Rx Channel 2		
92	All	Rx1_Application_Select	Software Application Select per SFF-8079, Rx Channel 1		
93	2-7	Reserved			
	1	Power_set	Power set to low power mode. Default 0.		
	0	Power_over-ride	Override of LPMode signal setting the power mode with software.		

Table 8 — Control Bytes

94	All	Tx4_Application_Select	Software Application Select per SFF-8079, Tx Channel 4 (Not support)
95	All	Tx3_Application_Select	Software Application Select per SFF-8079, Tx Channel 3 (Not support)
96	All	Tx2_Application_Select	Software Application Select per SFF-8079, Tx Channel 2 (Not support)
97	All	Tx1_Application_Select	Software Application Select per SFF-8079, Tx Channel 1 (Not support)
98-99	All	Reserved

Outline Dimensions

Units in MM

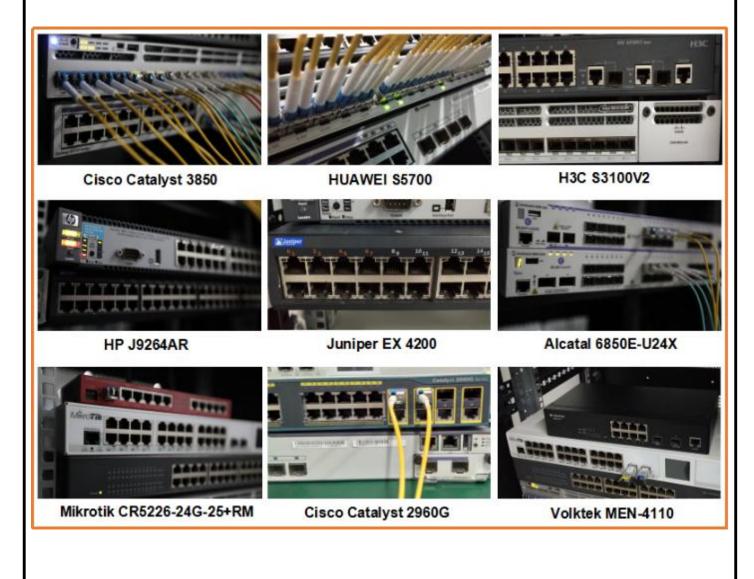

Regulatory Compliance

Feature	Reference	Performance
Electrostatic discharge (ESD)	IEC/EN 61000-4-2	Compatible with standards
Electromagnetic Interference (EMI)	FCC Part 15 Class B EN 55022 Class B (CISPR 22A)	Compatible with standards
Laser Eye Safety	FDA 21CFR 1040.10, 1040.11 IEC/EN 60825-1, 2	Class 1 laser product
Component Recognition	IEC/EN 60950, UL	Compatible with standards
ROHS	2002/95/EC	Compatible with standards
EMC	EN61000-3	Compatible with standards

Compatibility Test

In order to ensure the product compatibility, our products will be tested on the switch before shipment. Our modules can compatible with many mainstream brand switches, such as Cisco, Juniper, Extreme, Brocade, IBM, H3C, HP, Huawei, D-Link, Mikrotik, ZTE, TP-Link...

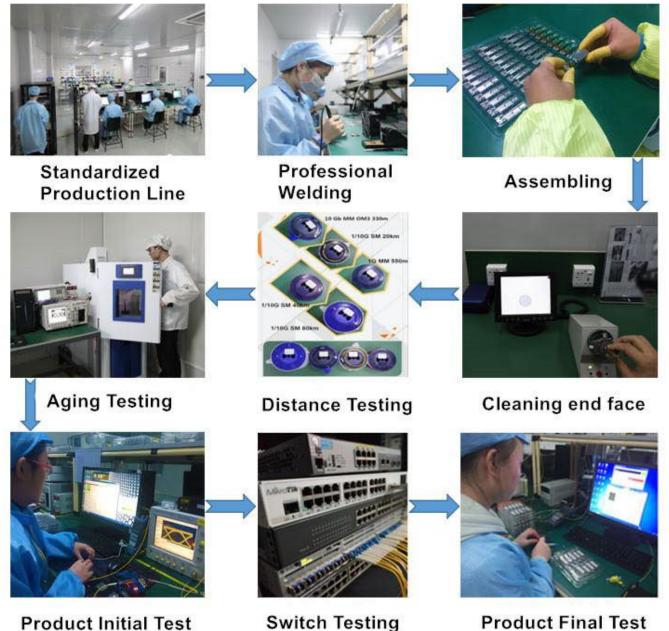

Our test equipment: VOLKTEK MEN-4110, HP 2530-8G, CRS226-24G-25+RM, Catalyst 2960G Series, Catalyst 3850 XS 10G SFP+, Catalyst 3750-E Series, HUAWEI S5700Series, H3C S3100V2 Series, Juniper-EX4200, etc.

Product Production Process

Quality Assurance

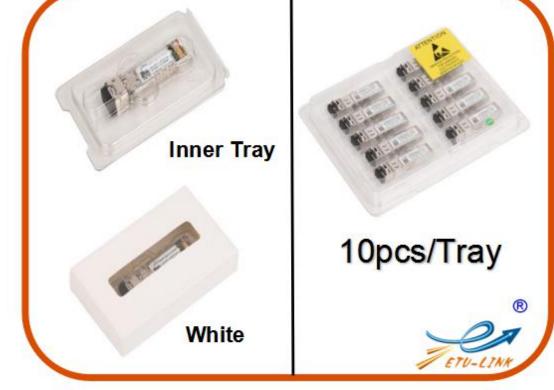

Continuous introduction of new equipment, produced by strict standards, strict quality inspection, to guarantee the high quality standard of each product.

Switch Testing

Product Final Test

ETU-Link provides two kinds of packaging, 10pcs/Tray and individual package.

Company: ETU-Link Technology Co., LTD Address: 4th Floor, C Building, JinBoLong Industrial Park, QingQuan Road, LongHua District, Shenzhen city, GuangDong Tel: +86-755 2328 4603

Addresses and phone number also have been listed at www.etulinktechnology.com. Please e-mail us at sales@etulinktechnology.com or call us for assistance.
