DESCRIPTIONS

This product specification covers the performance of the OSFP to QSFP-DD Adaptor Module that offers 800 Gigabit Ethernet transfer to 400、200、100 or 40 Gigabit Ethernet connectivity for OSFP only. it allows smooth and cost-effective migration to 800 Gigabit

Ethernet by providing an option to use lower-speed QSFP or enhanced QSFP-DD module in empty OSFP ports when the other end of the network is running at lower speeds.

Note:

1: QSFP-DD uses common ground (GND) for all signals and supply (power). All are common within the QSFP-DD module and all module voltages are referenced to this potential unless otherwise noted. Connect these directly to the host board signal-common ground plane.

2: VccRx, VccRx1, Vcc1, Vcc2, VccTx and VccTx1 shall be applied concurrently. VccRx, VccRx1, Vcc1, Vcc2, VccTx and VccTx1 may be internally connected within the module in any combination.

The connector Vcc pins are each rated for a maximum current of 1000 mA.

3: All Vendor Specific, Reserved and No Connect pins may be terminated with 50 ohms to ground on the host. Pad 65 (No Connect) shall be left unconnected within the module. Vendor specific and Reserved pads shall have an impedance to GND that is greater than 10 kOhms and less than 100 pF.

4: Plug Sequence specifies the mating sequence of the host connector and module. The sequence is 1A, 2A, 3A, 1B, 2B, 3B. Contact sequence A will make, then break contact with additional QSFP-DD pads. Sequence 1A, 1B will then occur simultaneously, followed by 2A, 2B, followed by 3A,3B.
